

Choice Formulary

Administered by MedImpact

July 2010

Foreword

This document represents the efforts of the MedImpact Healthcare Systems Pharmacy and Therapeutics (P & T) and Formulary Committees to provide physicians and pharmacists with a method to evaluate the safety, efficacy and cost-effectiveness of commercially available drug products. A structured approach to the drug selection process is essential in ensuring continuing patient access to rational drug therapies. The ultimate goal of the Choice Formulary is to provide a process and framework to support the dynamic evolution of this document to guide prescribing decisions that reflect the most current clinical consensus associated with drug therapy decisions.

This is accomplished through the auspices of the MedImpact P & T and Formulary Committees. These committees meet quarterly and more often as warranted to ensure clinical relevancy of the Formulary. To accommodate changes to this document, updates are made accessible as necessary.

Access to the most current version of the Choice Formulary can be obtained by visiting www.medimpact.com.

As you use this Formulary, you are encouraged to review the information and provide your input and comments to the MedImpact P & T and Formulary Committees.

The MedImpact P & T and Formulary Committees use the following criteria in the evaluation of drug selection for the Choice Formulary:

- Drug safety profile
- Drug efficacy
- Comparison of relevant therapeutic benefits to current formulary agents of similar use, and to minimize therapeutic duplication where possible
- Cost-effectiveness relative to comparable therapies

How to Use the Formulary

The Formulary is a list of medications available to MedImpact members under their pharmacy benefit. All drugs are listed by their generic names and most common proprietary (branded) name. The Formulary may be accessed by using the index, either by generic or proprietary name (in capital letters) and by therapeutic drug category. *In situations where an FDA approved generic equivalent is available, brand names are listed for reference purposes only, and do not denote coverage for the brand, unless specifically noted.* Any drug not found in this Formulary listing, or any Formulary updates published by MedImpact shall be considered a Non-Formulary drug.

All drugs are listed in each category in alphabetical order by generic name. Where an FDA approved generic is available for the listed generic name, the generic name is **bolded**.

For certain agents within the Formulary, a recommended prescribing guideline may apply. These are denoted throughout the document using the following symbols:

AGE	Age Edit	Coverage may depend on patient age
CU	Concurrent Use	Coverage or lack thereof may depend upon concurrent use of another drug
G	Gender Edit	Coverage may depend on patient gender
MD	Physician	Coverage may depend on prescribing physician's specialty or board certification
PA	Prior Authorization	Requires specific physician request process
QL	Quantity Limit	Coverage may be limited to specific quantities per prescription and/or time period
ST	Step Therapy	Coverage may depend on previous use of another drug

Please refer to the prescribing guideline appendix within this document for details regarding specific agents.

Benefit Coverage and Limitations

This printed Formulary does not provide information regarding the specific coverage and limitations an individual member may be subject to. Many members have specific benefit inclusions, exclusions, copays, or a lack of coverage, which are not reflected in the Formulary.

The Formulary applies only to outpatient drugs provided to members, and does not apply to medications used in inpatient settings. If a member has any specific questions regarding their coverage, they should contact their Plan Sponsor or MedImpact at (800) 788-2949.

Depending upon a member's specific benefit parameters, the following topics may apply:

1. Generic Substitution

When available, FDA approved generic drugs are to be used in all situations, regardless of the brand name indicated. The generic names are **bolded** in the formulary listing wherever an FDA approved generic drug product is available. Greater economy is realized through the use of generic

equivalents. This policy is not meant to preclude or supplant any state statutes that may exist. All drugs that are or become available generically are subject to review by MedImpact's Pharmacy and Therapeutics Committee. MedImpact approves such multi-source drugs for addition to the MAC list based on the following criteria:

- A multi-source drug product manufactured by at least one (1) nationally marketed company.
- At least one (1) of the generic manufacturer's products must have an "A" rating or the generic product has been determined to be unassociated with efficacy, safety or bioequivalency concerns by the MedImpact P & T Committee.
- Drug product will be approved for generic substitution by the MedImpact P & T Committee.
- Certain drug products with complex pharmacokinetics, dosage forms, narrow therapeutic efficacy or where blood level maintenance is crucial will not be subject to substitution. These drug products are:
 - ◊ Dilantin (except suspension)
 - ◊ Premarin

This list is reviewed and updated periodically based on the clinical literature and pharmacokinetic characteristics of currently available versions of these drug products.

If a member or physician requests a brand name product in lieu of an approved generic, the member, based upon their coverage, will typically be required to pay the difference in cost between the brand and the generic. If a physician determines that there is a documented medical need for the brand equivalent, a request for coverage may be made using the medication request process.

2. Three Tier Benefit

The Formulary may be applied to a three tier benefit design, where the member shares the cost of prescription drug therapy at three levels of copayment. In most instances, generically available drugs will be covered under the first or lowest copay tier, branded drugs listed on the Formulary will be covered under the second copay tier, and branded drugs not on the Formulary will be covered under the third or highest copay tier.

3. Medication Request Process

Depending upon plan benefit design, a medication request process may apply as follows:

A. Formulary Agents

Drugs that are listed in the Formulary with associated Prior Authorization (PA) require evaluation, per MedImpact P & T Committee Prior Authorization guidelines prior to dispensing at a network pharmacy. Each request will be reviewed on an individual patient need basis. If the request does not meet the guidelines established by the P & T Committee, the request will not be approved and alternative therapy may be recommended.

B. Non-Formulary Agents

Any drug not found in the Formulary listing, or any Formulary updates published by MedImpact, shall be considered a Non-Formulary drug. Coverage for non-formulary agents may be applied for in advance. When a member gives a prescription order for a non-formulary drug to a pharmacist, the pharmacist will evaluate the patient's drug history and contact the physician to determine if there is a reasonable medical need for a non-formulary drug. Each request will be reviewed on an individual patient need basis. Approval will be given if a documented medical need exists. The following basic guidelines are used:

- The use of Formulary Drugs is contraindicated in the patient.
- The patient has failed an appropriate trial of Formulary or related agents.
- The choices available in the Formulary are not suited for the present patient care need, and the drug selected is required for patient safety.
- The use of a Formulary drug may provoke an underlying condition, which would be detrimental to patient care.

If the request does not meet the guidelines established by the P & T Committee, the request will not be approved and alternative therapy may be recommended.

C. Obtaining Coverage

Coverage, questions or information regarding the medication request or formulary process may be obtained by:

1. Faxing a completed **Medication Request Form** to MedImpact at (858) 790-7100.
2. Contacting MedImpact at (800) 788-2949 and providing all necessary information requested.

MedImpact will provide an authorization number, specific for the medical need, for all approved requests. Non-approved requests may be appealed. The prescriber must provide information to support the appeal on the basis of medical necessity. Prior

Choice Formulary

Authorization is generally not available for drugs that are specifically excluded by benefit design.

4. General Exclusions

- A. Over the Counter (OTC) medications or their equivalents, unless otherwise specified in the Formulary listing.
- B. Nicotine Smoking Cessation products (i.e., transdermal nicotine, nicotine gum, nicotine inhaler).
- C. Drugs specifically listed as not covered.
- D. Any drug products used for cosmetic purposes.
- E. Experimental drug products or any drug product used in an experimental manner.
- F. Replacement of lost or stolen medication.
- G. Non self-administered injectable drug products unless otherwise specified in the Formulary listing.
- H. Foreign sourced drugs or drugs not approved by the United States Food & Drug Administration.

The P & T and Formulary Committees recognize that not all medical needs can be met with this document and encourage inquiries about alternative therapies.

5. Pharmacist and Physician Communication

The Formulary is a tool to promote cost-effective prescription drug use. The P & T and Formulary Committees have made every attempt to create a document that meets all therapeutic needs; however, the art of medicine makes this a formidable task. MedImpact welcomes the participation of physicians, pharmacists, and ancillary medical providers, in this dynamic process. Physicians and pharmacists are highly encouraged to direct any suggestions, comments or formulary additions to MedImpact at the following address:

Review Criteria:

The following guidelines are used in reviewing medication requests:

1. The use of Formulary Drug Products is contraindicated in the patient.
2. The patient has failed an appropriate trial of Formulary or related agents.
3. The choices available in the Formulary are not suited for the present patient care need and the drug selected is required for patient safety.
4. The use of a Formulary Drug Product may provoke an underlying medical condition, which would be detrimental to patient care.

SPECIALTY INJECTABLE CROSS REFERENCE LISTING

The following cross reference is being provided as a guide to formulary choices within prominent "specialty" injectable drug categories. General specialty categories are cross referenced to their corresponding formulary classification status and page number. This cross reference is not meant to be all-inclusive. Please refer to the Table of Contents or Index to determine formulary status of injectable medications not listed in this cross reference (e.g., Antineoplastics, Leukocyte Stimulants, etc.).
